

# KEUNDO

**New arrivals** 10-color small flatbed uv printer

## **SQ1810 UV** (G6×9/Epson I3200-U1×8)

10-color multifunctional UV flatbed printer

**10 colors available (fluorescent color/ coating P/special varnish available)**

C	M	Y	K						
W	C	M	Y	K	Lc	Lm	V		
W	C	M	Y	K	FY	FM	FG	FO	V

CMYK / Lc / Lm / FY / FM / FG / FO / W / V

Hard materials: glass, metal, tile, acrylic, plexiglass, wood, plastic, aluminum, cardboard, foam board, composite board, plywood, PVC, MDF, WPC, ABS, PP board, etc.;

Flexible materials: fabric, canvas, leather, vinyl, paper, etc.;

The use of fluorescent colors not only enhances the visual effect, but also makes these applications more creative and personalized.

## Parameter

Model	SQ1810 UV	
Printhead	G6×9 (Epson I3200-U1×8)	
Printing Technology	Piezoelectric inkjet, variable dot printing density, Ricoh 3.5PL/5PL	
Printing Size	Maximum printing area: 1800mm x 1000mm	
Resolution	600DPI, 900DPI, 1200DPI, etc.	
Number of Printheads	Optional 3-9 printheads	
Software	Photoprint (ONYX optional)	
Ink	Type	UV ink
	Color	CMYK / Lc / Lm / FY / FM / FG / FO / W / V
Media Thickness	0-80mm	
Negative Pressure System	Dual-channel digital adjustment, balanced negative pressure system	
Interface	USB 3.0	
Printing Speed (CMYK+W)	G6 (standard with 3pcs)	Draft mode: 18-20m <sup>2</sup> /h; Production mode: 12-15m <sup>2</sup> /h; High precision mode: 9-11m <sup>2</sup> /h
	I3200 (standard with 2pcs)	Draft mode: 10-12m <sup>2</sup> /h; Production mode: 6-8m <sup>2</sup> /h; High precision mode: 4-6m <sup>2</sup> /h
Power Supply	Maximum power: 5KW, AC220V, 50HZ~60HZ	
Working Environment	Temperature: 18~28°C; Humidity: 40%-60% (no condensation)	
Machine Dimensions	3890mm × 1870mm × 1600mm	
Machine Weight	1300kg	

## Technical Characteristics

- 10-color scheme provides high-quality printing effects;
- High-precision linear motor on the X-axis, 1um metal encoder strip, THK linear guide rail, providing precision and longevity for carriage operation;
- Y-axis servo motor with high-precision dual-Y synchronous servo, providing better feeding precision;
- Industrial-grade heavy-duty frame, enhancing machine stability and long-term use;
- Epson printhead base heating function, providing a stable printhead working environment;
- Automatic carriage lift function, suitable for thicker material printing needs;
- Self-developed ink supply system and micro-pressure control system, ensuring the stability and protection of the printing ink path;

## G6 Configuration

As an upgraded version of G5, The G6 has higher productivity and faster printing speed. It adopts the next-generation variable droplet technology, capable of three-level droplet variation, providing 5PL droplet size. This allows for high-speed or low-resolution printing while also achieving perfect print quality and dotless printing effects, bringing more realistic and detailed images.

Dovetail Structure: More convenient and efficient material loading and unloading

Linear Motor+ metal encoder strip: classic combination, stable and reliable

Dual Y Servo: High-precision dual Y synchronous servo control, providing more accurate feeding

Independent Temperature Control: Precise temperature control for different ink colors, ensuring stable ink output

Omni-directional Collision Protection: Comprehensive printhead collision protection, effectively avoiding printhead damage

Six Air Zones: Different air zones for different materials, with independent air zone control
